

Managing products in Sugar

Enable Filter Groups

Filter Groups allow you to tag and sort products within a collection by custom categories. This is facilitated by Shopify's flexible navigation system. Enable filter groups under the `Collection page` section of your theme editor.

To create a Filter Group, go to `Online Store > Navigation` and click `Add a menu list`, naming it *Tag Filters*. From there you can add a new link: the `Link Name` should be the title of the category you're sorting, and `Links To...` should be a collection — note that the filter group will only be displayed on the page of the chosen collection. Finally, in that same link row click `Filter with tags`, and enter in any tags you wish to filter that collection's products by. Afterward, you can add these tags to products.

Enable Sorting

Enable sorting under the `Collection page` section of the theme editor. Sorting gives your customers the ability to sort products using the following options provided in a dropdown menu:

- Featured
- \$ Low to High
- \$ High to Low
- A-Z
- Z-A
- Oldest to Newest
- Newest to Oldest
- Best Selling

Stock Level Indicator

Use this option to display a message overtop a product when its stock is below a certain amount. The product must be allowing Shopify to track its inventory under its Inventory Policy in order for this feature to work.

Under the Collection page section of the theme editor, you can enable Show stock level overlay and use the dropdown to select at what quantity level you want to

Listing Quick Shop

Enable this option, under the Collection page section of the theme editor, to allow customers to quickly view and add an

item to their cart from any product listing (such as a collection page or related products section).

Zooming on Product Images

Under the Product page section of the theme editor, enable this option to allow customers to click the image on a product page and pan around a larger version of your product image. Note: the full size image must be equal to or larger than 700px wide in order for this feature to work.

Quantity Box

Under the Product page section of the theme editor, enable this option to display a quantity field on each product page.

Related Products

Under the Product page section of the theme editor, enabling this option will display 2, 4, or 6 related products below the main content on a product page. Products are considered related if they belong to the same collection.
